

Chapter 1 — Executive Summary

1.1 Product Overview

Nume is a personal wealth operating system designed for individuals who want a complete view of their financial life.

Unlike traditional expense tracking applications, Nume focuses on wealth management first.

The platform helps users understand:

- How much they are worth today
- How their wealth is distributed
- How healthy their finances are
- Whether they are prepared for emergencies
- Whether they are progressing toward their financial goals

Nume is designed around long-term wealth management rather than daily expense tracking.

1.2 Product Vision

To become the leading personal wealth management platform for individuals in Egypt and the MENA region.

Nume should allow users to answer the following questions within seconds:

- What is my current net worth?
 - How healthy are my finances?
 - How much emergency coverage do I have?
 - How are my investments performing?
 - How much debt do I still owe?
 - Am I on track to achieve my financial goals?
-

1.3 Product Philosophy

Wealth First

Nume is a wealth tracker before it is an expense tracker.

The primary focus is:

- Assets
- Investments
- Savings

- Liabilities
- Net Worth
- Financial Growth

Expense tracking exists only to support financial planning and wealth calculations.

Simplicity

Users should enter information they already know.

The application should calculate everything else automatically.

Examples:

- Net Worth
 - Savings Rate
 - Emergency Fund Progress
 - Goal Forecasts
 - Investment Valuation
 - Loan Progress
-

Financial Accuracy

Financial calculations must reflect real-world financial behavior.

Examples:

- Net Worth includes assets and outstanding liabilities only.
 - Future loan interest is never included in Net Worth.
 - Emergency Fund reserves funds before goals use them.
 - Investment values are based on current market prices.
-

Automation

Financial products should automate calculations whenever possible.

Examples:

- Savings interest accrual
- Certificate returns
- Loan principal reduction
- Goal forecasting
- Investment valuation

Users may always override automated calculations with actual values.

Actual values become the source of truth.

1.4 Target User

Primary User

Professionals and families who want to manage:

- Savings
- Investments
- Debt
- Financial Goals
- Wealth Growth

from a single platform.

Secondary User

Individuals pursuing:

- Financial Independence
 - Wealth Building
 - Long-Term Planning
 - Retirement Preparation
-

1.5 Success Criteria

The MVP is successful when users can:

- Track all major assets
- Track all major liabilities
- Understand current net worth
- Monitor emergency fund readiness
- Track investment performance
- Manage financial goals
- Monitor financial health
- Understand monthly surplus

within a few minutes of opening the application.

Chapter 2 — MVP Scope

2.1 MVP Goal

The purpose of the MVP is to deliver the core Nume experience:

Understanding, managing, and growing personal wealth.

The MVP is not intended to be a complete financial management platform.

Only features directly supporting wealth tracking and financial planning are included.

2.2 Included Modules

Dashboard

Provides a complete overview of current financial position.

Includes:

- Net Worth
 - Financial Health
 - Emergency Fund
 - Cash Flow
 - Asset Allocation
 - Liability Allocation
 - Goals Progress
 - Recent Activity
-

Planning

Provides monthly financial planning assumptions.

Includes:

- Monthly Income
- Monthly Expenses
- Monthly Surplus
- Savings Rate
- Emergency Fund Planning

Planning data is user-defined and does not create transactions.

Accounts

Supports the following account types:

Money Accounts

- Wallet
- Cash
- Current Account
- Savings Account
- Certificate

Investment Accounts

- Gold
- Stocks

Liability Accounts

- Loan
 - Credit Card
-

Goals

Supports:

- Net Worth Goal
 - Custom Goals
 - Goal Forecasting
 - Goal Progress Tracking
-

More

Supports:

- Profile
 - Application Settings
 - Institutions
-

2.3 Included Financial Engines

Net Worth Engine

Calculates:

Assets minus liabilities.

Financial Health Engine

Calculates overall financial health score.

Emergency Fund Engine

Calculates emergency readiness.

Savings Account Engine

Calculates and optionally applies savings interest.

Certificate Engine

Calculates certificate returns and maturity metrics.

Loan Engine

Calculates loan progress and outstanding principal.

Goal Forecast Engine

Forecasts future goal completion dates.

2.4 Included Automation

Savings Accounts

Supports:

- Automatic interest posting
 - Manual interest posting
 - Manual override
-

Loans

Supports:

- Automatic installment processing
 - Manual installment processing
 - Manual override
-

Investment Valuation

Supports:

- Automatic gold valuation
 - Automatic stock valuation
-

2.5 Excluded Features

The following features are intentionally excluded from MVP:

Planning

- Budgets
- Planned Payments
- Calendar
- Recurring Transactions

Advanced Features

- AI Financial Coach
- Tax Planning
- Retirement Planning
- Family Accounts
- Shared Goals

Asset Classes

- Real Estate
- Crypto
- Mutual Funds

- Bonds

Platform Features

- Data Import
- Data Export
- Multi Currency
- Push Notifications

2.6 Product Boundary

If a feature does not directly support:

- Net Worth Growth
- Financial Health
- Emergency Fund Readiness
- Investment Tracking
- Debt Management
- Goal Achievement

it does not belong in the MVP.

2.7 Definition of MVP

The MVP is complete when a user can:

- Add accounts
- Track savings
- Track certificates
- Track investments
- Track debt
- Monitor net worth
- Monitor financial health
- Define monthly income and expenses
- Manage goals
- Forecast goal completion

without requiring any feature outside the MVP scope.

Chapter 3 — Product Architecture

3.1 Navigation Structure

Nume uses a five-tab bottom navigation.

The navigation reflects the user's financial journey:

Current Position
↓
Future Planning
↓
Sources of Wealth
↓
Financial Goals
↓
Application Settings

Dashboard

Purpose:

Understand current financial position.

Planning

Purpose:

Understand monthly financial assumptions and future readiness.

Accounts

Purpose:

Manage assets, investments, savings products, and liabilities.

Goals

Purpose:

Track financial objectives and wealth targets.

More

Purpose:

Manage profile, settings, and reference data.

3.2 Navigation Rules

The application does not use a global Floating Action Button.

Reason:

Nume is a wealth management platform rather than a daily transaction tracking application.

Actions should be contextual and appear only where relevant.

Examples:

Accounts Screen
→ Add Account

Goal Screen
→ Create Goal

Savings Account
→ Add Deposit

Gold Account
→ Add Holding

Loan Account
→ Record Payment

3.3 Information Architecture

Dashboard

- |
- |— Net Worth
- |— Financial Health
- |— Emergency Fund
- |— Cash Flow
- |— Asset Allocation
- |— Liability Allocation

- └─ Goals Progress
- └─ Recent Activity

Planning

- └─ Income
- └─ Expenses
- └─ Monthly Surplus
- └─ Emergency Fund Planning

Accounts

- └─ Money Accounts
 - └─ Wallet
 - └─ Cash
 - └─ Current Account
 - └─ Savings Account
 - └─ Certificate
- └─ Investment Accounts
 - └─ Gold
 - └─ Stocks
- └─ Liability Accounts
 - └─ Loan
 - └─ Credit Card

Goals

- └─ Net Worth Goal
- └─ Custom Goals

More

- └─ Profile
 - └─ Settings
 - └─ Institutions
-

3.4 Records Architecture

Records are not a standalone product module.

Records exist only to support:

- Account History
- Balance Changes
- Financial Auditability
- Automation Tracking

Records are accessed from:

- Account Details
- Dashboard Activity

Records do not appear in Bottom Navigation.

3.5 Dashboard Philosophy

Dashboard answers:

"What is my financial position today?"

Dashboard should be understandable within seconds.

Users should not need to navigate deeper to understand:

- Net Worth
- Financial Health
- Emergency Readiness
- Wealth Distribution

3.6 Planning Philosophy

Planning answers:

"What does my financial life look like every month?"

Planning is based on financial assumptions.

Planning data is not transactional data.

Examples:

Monthly Salary
Monthly Rent
Monthly Living Expenses

Planning values are manually maintained by users.

Planning does not create records.

Planning does not affect account balances directly.

Planning exists to power:

- Cash Flow Widget
- Savings Rate
- Emergency Fund Engine
- Goal Forecast Engine

3.7 Accounts Philosophy

Accounts are the primary source of truth inside Nume.

Every wealth calculation originates from accounts.

Examples:

- Net Worth
- Asset Allocation
- Liability Allocation
- Emergency Fund Assets
- Investment Values

All depend on account values.

3.8 Investment Architecture

Investment accounts never store direct values.

Investment accounts store holdings.

Gold

Account
↓
Gold Holdings
↓
Market Prices
↓
Calculated Value

Stocks

Account
↓
Stock Holdings
↓
Market Prices
↓
Calculated Value

Account Value is always calculated.

Account Value is never entered manually.

3.9 Goals Philosophy

Goals are outcomes.

Planning provides inputs.

Goals provide outputs.

Example:

Planning
Monthly Surplus = 15,000 EGP

↓

Goals

Remaining Goal Amount = 180,000 EGP

Forecast Completion = 12 Months

3.10 Empty State Philosophy

New users should see a clean financial state.

Default values:

Net Worth = 0

Assets = 0

Liabilities = 0

Emergency Fund = 0

Goals = 0

No synthetic or demo data should be displayed.

Every empty state must provide a clear next action.

Examples:

No Accounts
→ Add Account

No Goals
→ Create Goal

No Income Data
→ Add Monthly Income

No Expense Data
→ Add Monthly Expenses

3.11 MVP Navigation Summary

Dashboard
Current Wealth

Planning
Monthly Financial Assumptions

Assets, Investments, Liabilities

Goals
Financial Outcomes

More
Settings and Reference Data

Chapter 4 — Authentication

4.1 Purpose

Authentication provides secure access to user financial data.

Every account, goal, holding, planning assumption, and financial metric belongs to a single authenticated user.

4.2 Registration

Users can create a new account using:

- Email Address
- Password

Required Fields:

- Email
- Password

Validation:

- Email must be unique
 - Password must meet minimum security requirements
-

4.3 Email Verification

Email verification is required.

Flow:

Create Account
↓
Verify Email
↓
Login
↓
Access Application

Unverified users cannot access application data.

4.4 Login

Users can sign in using:

- Email
- Password

Successful login redirects to Dashboard.

4.5 Forgot Password

Users may reset their password.

Flow:

Forgot Password

↓

Email Link

↓

Reset Password

↓

Login

4.6 Session Management

Authentication sessions are managed by Supabase Auth.

Requirements:

- Persistent Login
 - Secure Session Storage
 - Automatic Session Refresh
-

4.7 Logout

Users may logout at any time.

Logout clears local session data and redirects to Login.

4.8 MVP Scope

Included:

- Registration
- Email Verification
- Login
- Forgot Password
- Logout

Excluded:

- Biometrics
- Social Login
- Passkeys
- Multi-Factor Authentication

Chapter 5 — Dashboard Module

5.1 Purpose

The Dashboard is the home screen of Nume.

It answers one question:

"Where do I stand financially today?"

The Dashboard is the primary decision-making screen in the application.

5.2 Dashboard Philosophy

Users should understand their financial position within seconds.

The Dashboard prioritizes:

- Wealth
- Financial Health
- Emergency Readiness
- Goal Progress

over transactional details.

5.3 Widget Order

Default Order:

1. Net Worth
 2. Financial Health
 3. Emergency Fund
 4. Cash Flow
 5. Asset Allocation
 6. Liability Allocation
 7. Goals Progress
 8. Recent Activity
-

5.4 Net Worth Widget

Purpose:

Display total wealth.

Formula:

Net Worth =
Assets – Liabilities

Included Assets:

Accounts where:

Include In Net Worth = ON

Included Liabilities:

- Loans
- Credit Cards

Loan Rule:

Only Outstanding Principal is included.

Future interest is excluded.

Displays:

- Net Worth
- Assets
- Liabilities

Action:

[View Details](#)

5.5 Financial Health Widget

Purpose:

Provide a simplified financial health score.

Range:

0 → 100

Inputs:

- Emergency Fund Score

- Savings Rate Score
- Debt Ratio Score

Displays:

- Health Score
- Status
- Recommendation

Statuses:

- Poor
 - Fair
 - Good
 - Excellent
-

5.6 Emergency Fund Widget

Purpose:

Display financial resilience.

Formula:

Emergency Fund Assets
÷
Monthly Expenses

Displays:

- Current Coverage
- Target Coverage
- Progress %
- Remaining Amount

Action:

[View Details](#)

5.7 Cash Flow Widget

Purpose:

Display monthly financial capacity.

Source:

Planning Module

Formula:

Monthly Income
–
Monthly Expenses

Displays:

- Income
- Expenses
- Monthly Surplus
- Savings Rate

This widget is not based on transactions.

5.8 Asset Allocation Widget

Purpose:

Display wealth distribution.

Asset Types:

- Cash
- Savings
- Certificates
- Gold
- Stocks

Displays:

- Allocation %
- Asset Values

Action:

[View Details](#)

5.9 Liability Allocation Widget

Purpose:

Display debt distribution.

Liability Types:

- Loans
- Credit Cards

Displays:

- Allocation %
- Outstanding Balances

Action:

[View Details](#)

5.10 Goals Progress Widget

Purpose:

Display progress toward active goals.

Displays:

- Goal Name
- Progress %
- Remaining Amount
- Status

Maximum:

Top 3 Active Goals

Action:

[View All Goals](#)

5.11 Recent Activity Widget

Purpose:

Display latest financial activity.

Sources:

- User Records
- System Records

Examples:

- Deposit Added
- Interest Posted
- Installment Processed
- Goal Created
- Balance Adjustment

Displays:

- Activity Type
 - Amount
 - Date
-

5.12 Empty State

First-Time User:

Net Worth = 0

Assets = 0

Liabilities = 0

Emergency Fund = 0

Goals = 0

Actions:

- Add Account
- Add Monthly Income
- Create Goal

No demo data should be displayed.

5.13 MVP Scope

Included:

- Net Worth
- Financial Health

- Emergency Fund
- Cash Flow
- Asset Allocation
- Liability Allocation
- Goals Progress
- Recent Activity

Excluded:

- AI Recommendations
- Benchmarks
- Social Features
- Widget Customization

Chapter 6 — Planning Module

6.1 Purpose

Planning helps users define the financial assumptions that drive their future financial outcomes.

While Dashboard answers:

"Where do I stand today?"

Planning answers:

"What does my monthly financial life look like?"

Planning is designed for financial forecasting rather than transaction management.

6.2 Planning Philosophy

Planning contains user-defined monthly assumptions.

Planning data is not transactional data.

Planning does not:

- Create Records
- Update Account Balances
- Move Money
- Generate Transactions

Planning exists only to power:

- Cash Flow Analysis
 - Savings Rate
 - Emergency Fund Planning
 - Goal Forecasting
-

6.3 Planning Structure

Planning contains four sections:

Monthly Income

Monthly Expenses

Monthly Surplus

Emergency Fund Planning

6.4 Monthly Income

Purpose:

Define recurring monthly income sources.

Users may create any number of income sources.

Income Source Properties

Each income source contains:

- Name
- Monthly Amount

Examples:

- Salary
 - Freelancing
 - Rental Income
 - Business Income
 - Dividends
-

User Actions

Users may:

- Add Income Source
 - Edit Income Source
 - Delete Income Source
-

Total Monthly Income

Calculated automatically.

Formula:

Sum(All Income Sources)

Example:

Salary
40,000

Rental Income
7,000

Freelancing
5,000

Total Income:

52,000 EGP

6.5 Monthly Expenses

Purpose:

Define recurring monthly expenses.

Users may create any number of expense items.

Expense Item Properties

Each expense item contains:

- Name
- Monthly Amount

Examples:

- Housing
 - Food
 - Education
 - Transportation
 - Utilities
 - Family Expenses
 - Car Expenses
-

User Actions

Users may:

- Add Expense Item
- Edit Expense Item
- Delete Expense Item

Total Monthly Expenses

Calculated automatically.

Formula:

Sum(All Expense Items)

Example:

Housing
10,000

Food
5,000

Education
4,000

Transportation
3,500

Total Expenses:

22,500 EGP

6.6 Monthly Surplus

Purpose:

Calculate monthly financial capacity.

Monthly Surplus is generated automatically.

Formula:

Monthly Income
-
Monthly Expenses
=

Monthly Surplus

Displays:

- Monthly Surplus Amount

Example:

Income:
52,000

Expenses:
22,500

Surplus:
29,500

6.7 Savings Rate

Purpose:

Measure how much income is retained.

Formula:

$$\begin{array}{l} \text{Monthly Surplus} \\ \div \\ \text{Monthly Income} \\ = \\ \text{Savings Rate} \end{array}$$

Example:

$$\begin{array}{l} 29,500 \\ \div \\ 52,000 \end{array}$$

Savings Rate:

56.7%

6.8 Emergency Fund Planning

Purpose:

Define financial resilience targets.

Emergency Fund Planning is based on:

- Monthly Expenses
 - Emergency Fund Assets
 - User Target
-

Target Options

Users may select:

- 3 Months
 - 6 Months
 - 9 Months
 - 12 Months
 - Custom
-

Required Emergency Fund

Calculated automatically.

Formula:

Monthly Expenses
x
Target Months

Example:

Expenses:
20,000

Target:
6 Months

Required Amount:

120,000 EGP

Current Emergency Coverage

Calculated automatically.

Formula:

Emergency Fund Assets
÷
Monthly Expenses

Example:

Emergency Assets:
150,000

Monthly Expenses:
25,000

Coverage:

6 Months

Displays

- Current Coverage
 - Target Coverage
 - Progress %
 - Required Amount
 - Remaining Amount
-

6.9 Planning Rules

Planning data is independent from:

- Accounts
- Records
- Transactions

Planning values never affect account balances.

Planning values never create records.

Planning values are forecasting inputs only.

6.10 Goal Forecast Integration

Planning powers Goal Forecasts.

The following values are used:

- Monthly Income
- Monthly Expenses
- Monthly Surplus

Goals consume these values to estimate:

- Completion Date
- Required Contribution

Goal Forecast calculations occur inside the Goals module.

Planning does not display Goal Forecasts directly.

6.11 Categories Rule

Planning does not use Categories.

Planning does not include Categories Management.

Income Sources and Expense Items are lightweight planning entries only.

They are not shared with:

- Accounts
- Records
- Goals

Future versions may introduce Categories as a separate system.

6.12 Empty State

When no planning data exists:

Monthly Income:

0

Monthly Expenses:

0

Monthly Surplus:

0

Savings Rate:

0%

Actions:

- Add Income Source
 - Add Expense Item
-

6.13 MVP Scope

Included:

- Dynamic Income Sources
- Dynamic Expense Items
- Monthly Surplus
- Savings Rate
- Emergency Fund Planning

Excluded:

- Budgets
- Planned Payments
- Calendar
- Recurring Transactions
- Categories Management
- Budget Alerts
- Auto Execution

Chapter 7 — Accounts Module

7.1 Purpose

Accounts are the foundation of Nume.

Every wealth calculation originates from accounts.

Examples:

- Net Worth
- Asset Allocation
- Liability Allocation
- Emergency Fund Coverage
- Financial Health
- Goal Progress

All depend on account values.

7.2 Account Philosophy

Accounts represent real-world financial products.

Nume tracks:

- Money
- Investments
- Liabilities

Each account has its own behavior, valuation rules, and automation logic.

Current Balance

Stores the current account value.

Current Balance is the source of truth for account valuation.

Account balances are not reconstructed from records.

7.3 Account Groups

Money Accounts

- Wallet
 - Cash
 - Current Account
 - Savings Account
 - Certificate
-

Investment Accounts

- Gold
 - Stocks
-

Liability Accounts

- Loan
 - Credit Card
-

7.4 Common Account Properties

All account types contain:

Name

User-defined.

Examples:

- Main Wallet
 - CIB Savings
 - Thndr Portfolio
 - Car Loan
-

Institution

Optional.

Examples:

- CIB
- NBE
- Banque Misr
- Thndr

Notes

Optional.

Status

- Active
 - Archived
-

Created Date

System Generated.

7.5 Account Settings

Every account supports:

Include In Net Worth

ON / OFF

Controls whether the account contributes to Net Worth calculations.

Default:

ON

Include In Emergency Fund

ON / OFF

Controls whether the account contributes to Emergency Fund calculations.

Default:

OFF

Examples:

Savings Account → ON

Certificate → OFF

Gold → OFF

Current Account → ON

7.6 Money Accounts

Wallet

Represents physical money carried by the user.

Value entered manually.

Cash

Represents cash outside banking institutions.

Value entered manually.

Current Account

Represents bank current/checking accounts.

Value entered manually.

Supports:

- Deposits
 - Withdrawals
 - Adjustments
-

7.7 Savings Accounts

Savings Accounts are interest-bearing accounts.

They support automatic interest processing.

Required Fields

- Name
 - Institution
 - Current Balance
 - Interest Rate
 - Interest Type
 - Interest Mode
 - Payout Frequency
-

Interest Rate Rule

All interest rates are annual rates.

Example:

27%

means:

27% Annual

Not:

27% Monthly

Interest Types

Fixed

Single rate.

Example:

22%

Tiered

Example:

0 - 50k = 18%

50k - 100k = 20%

100k+ = 22%

Interest Modes

Simple

Interest calculated on principal.

Compound

Interest calculated on current balance.

Payout Frequency

- Monthly
 - Quarterly
 - Semi Annual
 - Annual
-

Interest Destination

Same Account

Interest added back to account.

Another Account

Interest transferred to selected account.

Auto Apply

Enabled

System:

- Calculates interest
- Creates system record

- Updates balances
-

Disabled

System calculates expected values only.

User records actual payout manually.

Manual Override

User-entered values always become source of truth.

7.8 Certificate Accounts

Certificates represent fixed-term deposit products.

Required Fields

- Principal Amount
 - Interest Rate
 - Purchase Date
 - Maturity Date
 - Payout Frequency
 - Destination Account
 - Auto Apply
-

Interest Rate Rule

Stored as Annual Interest Rate.

Displays

- Principal
- Expected Return
- Remaining Days
- Destination Account

Certificate Balance Rule

Certificate balances always remain equal to principal.

Interest payouts never increase certificate balance.

Interest payouts may be transferred automatically to a destination account selected by the user.

Auto Apply

Enabled

System:

- Calculates interest
 - Creates system record
 - Transfers payout to destination account
-

Disabled

System calculates expected values only.

User records actual payout manually.

MVP Rule

Nume supports traditional Egyptian certificate products only.

Certificate interest is distributed to a destination account and is never reinvested into certificate principal.

Advanced certificate lifecycle management is excluded.

7.9 Gold Accounts

Gold Accounts contain holdings only.

Gold Accounts never store direct values.

Holding Fields

- Name
- Weight
- Karat
- Purchase Price
- Purchase Date

Account Value

Calculated automatically.

Formula:

Current Gold Price

×

Weight

Valuation Rule

Purchase Price is stored for reference only.

Current Value always uses market pricing.

7.10 Stock Accounts

Stock Accounts contain holdings only.

Stock Accounts never store direct values.

Holding Fields

- Symbol
- Quantity
- Purchase Price
- Purchase Date

Account Value

Calculated automatically.

Formula:

Current Market Price

×

Quantity

Market Data

Uses EGX pricing source.

Valuation Rule

Purchase Price is stored for reference only.

Current Value always uses market pricing.

7.11 Loan Accounts

Loans represent liabilities.

Simple Mode

Required Fields:

- Outstanding Principal
 - Monthly Installment
 - Remaining Tenors
-

Advanced Mode

Required Fields:

- Original Amount
 - Interest Rate
 - Start Date
 - Tenor
 - Due Day
-

Interest Rate Rule

Stored as Annual Interest Rate.

Auto Processing

Enabled

System:

- Processes installment
 - Creates records
 - Reduces principal
 - Updates balances
-

Disabled

System calculates expected values only.

User records payments manually.

Manual Override

Manual changes always become source of truth.

Net Worth Rule

Only Outstanding Principal contributes to Net Worth.

Future interest is excluded.

7.12 Credit Card Accounts

Represents revolving liabilities.

Fields

- Credit Limit
 - Outstanding Balance
-

Displays

- Credit Limit
 - Outstanding Balance
 - Available Credit
 - Utilization %
-

Net Worth Rule

Outstanding Balance contributes to liabilities.

7.13 Records Layer

Records support account history and financial auditability.

Records are not the source of truth.

Account balances remain the source of truth.

Records explain how balances changed over time.

Record Types

- Income
- Expense
- Transfer
- Adjustment
- System Generated

Examples:

- Interest Posted
 - Loan Installment
 - Balance Correction
-

Record Processing

Creating a record may update an account balance.

Example:

Income Record

+10,000

↓

Account Balance Updated

↓

Record Stored

Important Rule

Account balances are not reconstructed from records.

Records are an audit layer only.

Record Access

Records are accessible from:

- Account Details
- Dashboard Activity

Only.

7.14 Balance Reconciliation

Users may update account balances manually.

Examples:

- Correcting bank balances
- Correcting loan balances
- Correcting investment quantities

System creates Adjustment Records automatically.

7.15 Empty States

No Accounts

Displays:

- Add Account
-

No Holdings

Displays:

- Add Holding
-

No Records

Displays:

- Add First Record
-

7.16 MVP Scope

Included

- Money Accounts
- Savings Accounts
- Certificates
- Gold Holdings
- Stock Holdings
- Loans
- Credit Cards
- Records
- Auto Interest Processing

- Auto Loan Processing
-

Excluded

- Real Estate
- Crypto
- Mutual Funds
- Bonds
- Multi Currency Accounts

Chapter 8 — Goals Module

8.1 Purpose

Goals help users understand when they are expected to achieve important financial milestones.

Goals are driven by:

- Available Wealth
- Monthly Surplus

Goals do not manage money.

Goals do not hold balances.

Goals do not own accounts.

8.2 Goals Philosophy

Nume uses a Sequential Goal Model.

Users define:

- What they want
- How much it costs

Nume calculates:

- When it can be achieved
- Remaining Amount
- Goal Status

Goals are ordered by the user.

Only one goal is active at a time.

8.3 Wealth Waterfall Model

Before goals are evaluated, Nume reserves Emergency Fund requirements.

Calculation Order

Net Worth

↓

Emergency Fund Reserve

↓

Available Wealth

↓

Goals Engine

Available Wealth

Formula:

$$\begin{aligned} \text{Available Wealth} &= \\ \text{Net Worth} & \\ - & \\ \text{Required Emergency Fund} & \end{aligned}$$

Example

Net Worth:

500,000

Required Emergency Fund:

150,000

Available Wealth:

350,000

Only Available Wealth is used by Goals.

8.4 Goals

All goals are user-created goals.

Users provide:

- Name
- Target Amount

Nume calculates:

- Remaining Amount
- Status
- Forecast Completion Date

Goals are funded by Available Wealth.

8.5 Goal Properties

Every goal contains:

Name

User Defined

Target Amount

Required

Example:

300,000 EGP

Sort Order

User Controlled

Goals can be reordered at any time.

Status

System Calculated

Possible Values:

- Active
- Upcoming

- Completed
 - Archived
-

8.6 Sequential Goal Engine

Goals are evaluated in order.

Example:

1. Car
 2. House
 3. Financial Freedom
-

The first unfinished goal becomes:

Active Goal

All remaining goals become:

Upcoming Goals

Archived goals are excluded from calculations.

Sequential Forecast Rule

Goal forecasts consume Available Wealth according to goal order.

When a goal is completed, its target amount is deducted from Available Wealth before forecasting the next goal.

Example:

Available Wealth = 1,000,000

Goal 1 = 300,000

Goal 2 = 500,000

Goal 2 starts forecasting from:

1,000,000

—

300,000

700,000

Archived Goal Rule

Archived goals:

- Do not participate in forecasting
 - Do not participate in ordering
 - Do not consume Available Wealth
 - Do not affect other goals
-

8.7 Goal Progress

Progress is calculated using Available Wealth.

Example:

Available Wealth:

350,000

Goal:

300,000

Status:

Completed

Remaining Available Wealth

After completion:

350,000

–

300,000

50,000

This remaining wealth is used by the next goal.

Progress Rule

Goal Progress and Goal Forecast are calculated independently.

Goal Progress is based on Available Wealth.

Changes to account balances may increase or decrease Goal Progress.

Changes to Planning assumptions do not affect Goal Progress directly.

8.8 Goal Forecast Engine

Purpose

Estimate completion date automatically.

Inputs

- Available Wealth
 - Monthly Surplus
 - Target Amount
-

Remaining Amount

Formula:

Target Amount

–

Current Available Wealth

Forecast

Formula:

$$\begin{array}{l} \text{Remaining Amount} \\ \div \\ \text{Monthly Surplus} \\ \\ = \\ \text{Remaining Months} \end{array}$$

Forecast Rule

If Monthly Surplus is less than or equal to zero:

Forecast Status:

Unavailable

The system cannot estimate a completion date.

Forecast Dependency Rule

Goal Forecast is based on Monthly Surplus.

Monthly Surplus is calculated from Planning assumptions.

Changes to Planning Income or Planning Expenses may affect forecast dates.

Records do not affect Goal Forecast calculations.

UI Guidance

Display:

Forecast Unavailable

Users may view additional information explaining why a forecast cannot currently be calculated.

Completion Date

Calculated automatically.

Example:

Available Wealth:
250,000

Goal:
500,000

Monthly Surplus:
10,000

Remaining:
250,000

Forecast:
25 Months

Completion:
July 2028

8.9 Goal Status

Active

Current goal in the sequence.

Only one goal can be Active.

Upcoming

Waiting for previous goals to be completed.

A goal may remain Upcoming even if Available Wealth exceeds its target amount.

Completed

A goal becomes Completed only after all preceding goals in the sequence have been completed.

Archived

Excluded from forecasting and goal calculations.

Archived goals remain visible for historical reference.

8.10 Goal Completion

A goal becomes completed when:

Available Wealth

$\geq$

Target Amount

AND

All previous goals in the sequence have already been completed.

System Actions

- Mark Goal Completed
 - Activate Next Goal
 - Recalculate Forecasts
-

8.11 Goal Reordering

Users may:

- Move Goal Up
- Move Goal Down
- Reorder Goals

Forecasts recalculate automatically.

Archived goals cannot participate in ordering.

8.12 Goal Rules

Goals never:

- Own Money
- Own Accounts
- Create Transactions

- Create Records
- Move Balances

Goals are forecasting tools only.

8.13 Empty States

No Goals

Displays:

Create Goal

No Active Goal

Displays:

Create Your First Goal

8.14 MVP Scope

Included

- User Created Goals
 - Sequential Goals
 - Goal Forecasting
 - Automatic Completion Dates
 - Goal Reordering
 - Goal Archiving
-

Excluded

- Goal Allocations
- Goal Wallets
- Goal Contributions
- Linked Accounts
- Shared Goals
- Family Goals

Chapter 9 — Financial Health Engine

9.1 Purpose

The Financial Health Engine transforms financial data into a simple health assessment.

Its purpose is to answer:

"How healthy are my finances?"

9.2 Philosophy

Users should not need to manually analyze:

- Assets
- Liabilities
- Savings
- Emergency Funds

The system should provide a simple summary score.

9.3 Financial Health Score

Range:

0 – 100

Score Categories

0 – 39

Poor

40 – 59

Fair

60 – 79

Good

80 – 100

Excellent

9.4 Net Worth Engine

Formula:

Assets
–
Liabilities

=

Net Worth

Included Assets

Accounts where:

Include In Net Worth = ON

Included Liabilities

- Loans
 - Credit Cards
-

Loan Rule

Only Outstanding Principal is included.

Future interest is excluded.

9.5 Emergency Fund Engine

Purpose:

Measure financial resilience.

Required Emergency Fund

Formula:

Monthly Expenses
×
Emergency Fund Target Months

Emergency Coverage

Formula:

Emergency Fund Assets
÷
Monthly Expenses

=

Coverage Months

Emergency Assets

Accounts where:

Include In Emergency Fund = ON

9.6 Available Wealth Engine

Purpose:

Determine wealth available for goals.

Formula

Net Worth
–
Required Emergency Fund

=

Available Wealth

Purpose

Available Wealth powers:

- Goals Module
 - Goal Forecasting
 - Wealth Waterfall
-

9.7 Savings Rate Engine

Formula:

Monthly Surplus
÷
Monthly Income

=

Savings Rate

9.8 Debt Ratio Engine

Formula:

Total Liabilities
÷
Total Assets

=

Debt Ratio

9.9 Asset Allocation Engine

Asset Types:

- Cash
- Savings
- Certificates
- Gold
- Stocks

Outputs:

- Allocation %
 - Allocation Value
-

9.10 Liability Allocation Engine

Liability Types:

- Loans
- Credit Cards

Outputs:

- Allocation %
 - Outstanding Balance
-

9.11 Health Score Inputs

The MVP score uses:

- Emergency Fund Score
- Savings Rate Score
- Debt Ratio Score

Net Worth is displayed but does not directly contribute to score calculation.

9.12 Health Recommendations

Examples:

- Increase Emergency Fund
- Reduce Debt Exposure
- Increase Savings Rate
- Maintain Current Strategy

9.13 Dashboard Usage

The Financial Health Engine powers:

- Financial Health Widget
- Emergency Fund Widget
- Asset Allocation Widget
- Liability Allocation Widget
- Goals Forecasting

9.14 MVP Scope

Included:

- Net Worth
- Available Wealth
- Emergency Fund
- Savings Rate
- Debt Ratio
- Asset Allocation
- Liability Allocation
- Financial Health Score

Excluded:

- AI Recommendations
- Predictive Forecasting
- Peer Benchmarking
- Retirement Readiness

Chapter 10 — More Module

10.1 Purpose

The More Module contains user preferences, profile settings, and reference data.

More is intentionally lightweight.

It contains application settings only.

It does not contain financial functionality.

10.2 Profile

Displays:

- Full Name
- Email Address
- Profile Photo

Users may:

- Update Name
- Update Profile Photo

Email changes are outside MVP scope.

10.3 Application Settings

Theme

Options:

- Light
 - Dark
 - System
-

Language

Options:

- English

- Arabic
-

Currency Display

MVP Default:

EGP

Future multi-currency support is excluded.

Decimal Display

Options:

- Show Decimals
 - Hide Decimals
-

Date Format

Options:

- DD/MM/YYYY
 - MM/DD/YYYY
-

10.4 Institutions

Purpose:

Store financial institutions used by accounts.

Examples:

Banks:

- CIB
- NBE
- Banque Misr

Brokers:

- Thndr

- EFG Hermes
-

10.5 Institution Usage

Institutions may be linked to:

- Savings Accounts
 - Current Accounts
 - Certificates
 - Stock Accounts
 - Loan Accounts
 - Credit Cards
-

10.6 Empty States

No Institutions

Displays:

Add Institution

10.7 MVP Scope

Included:

- Profile
- Theme
- Language
- Currency Display
- Date Format
- Institutions

Excluded:

- Notifications Settings
- Security Center
- Connected Accounts
- Integrations

Chapter 11 — Database Design

11.1 Design Principles

The database should support:

- Current MVP
- Future Wealth Features

The schema should be expandable without major migrations.

The MVP database must support future growth without requiring structural redesign.

11.2 Users

Stores:

- Profile Data
- Preferences
- Settings

Relationship:

1 User

→ Many Accounts

→ Many Goals

→ Many Records

→ Many Planning Items

11.3 Planning

Purpose

Store monthly financial assumptions.

Planning remains independent from Accounts and Records.

Income Items

Fields:

- id

- user_id
- name
- amount
- created_at

Examples:

- Salary
 - Rental Income
 - Business Income
 - Freelancing
-

Expense Items

Fields:

- id
- user_id
- name
- amount
- created_at

Examples:

- Housing
 - Food
 - Education
 - Transportation
-

11.4 Accounts

Purpose

Store all account containers.

Fields

- id
- user_id
- account_type
- name
- institution_id
- current_balance
- include_in_net_worth
- include_in_emergency_fund
- status

- created_at
 - last_updated_at
 - archived_at
-

Supported Account Types

Money Accounts

- Wallet
- Cash
- Current Account
- Savings Account
- Certificate

Investment Accounts

- Gold
- Stocks

Liability Accounts

- Loan
 - Credit Card
-

Source of Truth

- Current Balance is the source of truth.
 - Financial calculations always use account balances.
 - Balances are not reconstructed from records.
-

11.5 Holdings

Purpose

Store investment holdings.

Used by:

- Gold Accounts
 - Stock Accounts
-

Fields

- id
 - account_id
 - holding_type
 - symbol
 - quantity
 - purchase_price
 - purchase_date
 - created_at
-

Examples

Gold

- Gold Bar
- Gold Coin
- Bracelet

Stocks

- COMI
 - ETEL
 - HRHO
-

11.6 Savings Configurations

Purpose

Store savings account rules.

Fields

- account_id
 - annual_interest_rate
 - interest_type
 - interest_mode
 - payout_frequency
 - destination_account_id
 - auto_apply
-

Interest Types

- Fixed
 - Tiered
-

Interest Modes

- Simple
 - Compound
-

Payout Frequencies

- Monthly
 - Quarterly
 - Semi Annual
 - Annual
-

11.7 Certificates

Purpose

Store certificate configuration.

Fields

- account_id
 - principal
 - annual_interest_rate
 - purchase_date
 - maturity_date
 - payout_frequency
 - destination_account_id
 - auto_apply
-

Interest Rule

All rates are stored as annual interest rates.

Certificate Rule

Certificate balances always remain equal to principal.

Interest payouts never increase certificate balance.

Interest payouts may be transferred automatically to a destination account selected by the user.

MVP Rule

Nume supports traditional Egyptian certificate products only.

Certificate interest is distributed to a destination account and is never reinvested into certificate principal.

11.8 Loans

Purpose

Store loan configuration.

Fields

- account_id
 - outstanding_principal
 - original_amount
 - annual_interest_rate
 - installment_amount
 - remaining_tenors
 - auto_processing
-

Interest Rule

All rates are stored as annual interest rates.

Net Worth Rule

Only outstanding principal contributes to liabilities.

Future interest is excluded.

11.9 Credit Cards

Purpose

Store revolving debt information.

Fields

- account_id
 - credit_limit
 - outstanding_balance
-

11.10 Records

Purpose

Provide financial auditability and account history.

Records are a supporting layer.

Records are not a standalone module.

Fields

- id
 - user_id
 - account_id
 - reference_id
 - record_type
 - amount
 - description
 - created_at
-

Record Types

- Income
 - Expense
 - Transfer
 - Adjustment
 - System Generated
-

System Generated Examples

- Interest Posted
 - Loan Installment
 - Balance Correction
-

Source of Truth Rule

- Records are an audit layer.
 - Account balances remain the source of truth.
 - Records explain historical balance changes.
 - Financial calculations never rebuild balances from records.
-

11.11 Goals

Purpose

Store user goals.

Goals use the Sequential Goal Model.

Goals do not store allocations.

Goals do not own balances.

Fields

- id
 - user_id
 - name
 - target_amount
 - sort_order
 - is_archived
 - created_at
-

Goal Engine Rule

The database stores only user-defined goal information.

Goal states are calculated dynamically by the Goal Engine.

Examples:

- Active
- Upcoming
- Completed

Archived goals are identified using:

- is_archived
-

MVP Rule

No goal allocation tables exist in MVP.

No goal wallet tables exist in MVP.

No goal contribution tables exist in MVP.

11.12 Institutions

Purpose

Store financial institutions.

Fields

- id
 - name
 - type
-

Institution Types

- Bank
 - Broker
 - Other
-

11.13 Snapshots

Purpose

Store historical financial positions.

Snapshots are generated automatically once per day.

Used for future charts, analytics, and reporting.

Snapshot Data

- Daily Net Worth
 - Daily Assets
 - Daily Liabilities
 - Daily Available Wealth
 - Daily Emergency Fund Coverage
 - Daily Financial Health Score
-

MVP Rule

Snapshots are stored but not displayed.

Charts and trend visualizations are future versions.

11.14 Market Data

Purpose

Store valuation data for investments.

Gold Prices

Supports:

- Gold Valuation
 - Historical Tracking
-

Stock Prices

Supports:

- Portfolio Valuation
 - Historical Tracking
-

MVP Sources

- Gold Market Prices
 - EGX Market Prices
-

11.15 Security

All tables are protected using Row Level Security (RLS).

Users can access only their own data.

Requirements

- User Isolation
- Secure Queries
- Protected Financial Data
- Ownership Validation

No user can access another user's financial information.

11.16 Database Design Summary

Core Tables

- users
- planning_income_items
- planning_expense_items
- accounts
- holdings
- savings_configurations
- certificates
- loans
- credit_cards
- records
- goals
- institutions
- snapshots
- gold_prices
- stock_prices

The database is designed to support the MVP while remaining compatible with future wealth management features.

Chapter 12 — Technical Architecture

12.1 Purpose

This chapter defines the technical foundation of Nume MVP.

The architecture must support:

- MVP requirements
 - Future expansion
 - Performance
 - Maintainability
 - Scalability
-

12.2 Architecture Principles

Simplicity First

The MVP should avoid unnecessary complexity.

Single Source of Truth

All financial calculations originate from database state.

Server-Driven Data

The database is the source of truth.

Frontend displays calculated results.

Future Expansion

The architecture must support future features without major rewrites.

Examples:

- Budgets
- Planned Payments
- Multi Currency
- Real Estate

- Family Accounts

12.3 Frontend Stack

Framework

Next.js 16

Language

TypeScript

Strict Mode Enabled

Styling

Tailwind CSS v4

Components

Shadcn Nova

Accessibility

Radix UI

Icons

Lucide Icons

Forms

React Hook Form

Zod Validation

12.4 State Management

Server State

TanStack Query

Used for:

- Accounts
- Goals
- Planning
- Market Data

Local State

React State

Used for:

- UI State
- Modals
- Filters
- Temporary Forms

Global State

Avoid unless required.

The MVP should not introduce Zustand or Redux.

12.5 Backend

Platform

Supabase

Services

Supabase Auth

Supabase Database

Supabase Storage

Supabase Edge Functions

Supabase Cron Jobs

12.6 Authentication

Authentication is managed entirely by Supabase Auth.

Supported:

- Registration
- Login
- Logout
- Password Reset
- Email Verification

Excluded:

- Social Login
 - Biometrics
 - MFA
-

12.7 Database

Database:

PostgreSQL

Managed by Supabase.

Security

Row Level Security (RLS)

Enabled on all tables.

Ownership Model

All records belong to a single authenticated user.

12.8 Financial Calculations

Financial calculations should be centralized.

Examples:

- Net Worth
 - Available Wealth
 - Emergency Fund Coverage
 - Savings Rate
 - Financial Health Score
-

Rule

Calculations must not be duplicated across screens.

One calculation source only.

12.9 Background Jobs

Purpose:

Run automated financial operations.

Savings Jobs

Responsibilities:

- Calculate Interest
 - Post Interest
 - Create System Records
-

Loan Jobs

Responsibilities:

- Process Installments

- Reduce Outstanding Principal
 - Create System Records
-

Snapshot Jobs

Responsibilities:

Store:

- Net Worth
- Assets
- Liabilities
- Available Wealth
- Emergency Coverage
- Health Score

Frequency:

Daily

Market Data Jobs

Responsibilities:

Update:

- Gold Prices
- Stock Prices

Frequency:

Configurable

12.10 Market Data Architecture

Gold Pricing

Store:

- Price
- Timestamp

Used for:

- Gold Valuation
 - Historical Tracking
-

Stock Pricing

Store:

- Symbol
- Price
- Timestamp

Used for:

- Portfolio Valuation
-

MVP Rule

Market data updates should not block application usage.

Last known price remains available.

12.11 API Layer

All data access should be abstracted through service layers.

Examples:

- Accounts Service
- Goals Service
- Planning Service
- Market Data Service

Avoid direct database calls throughout UI components.

12.12 File Storage

Supabase Storage

Used for:

- Profile Photos

Excluded:

- Document Management
 - Attachments
-

12.13 Security

Requirements:

- RLS Enabled
 - User Isolation
 - Secure Sessions
 - Protected Financial Data
-

Auditability

System Generated Records must remain traceable.

Examples:

- Interest Posting
 - Installment Processing
 - Balance Adjustments
-

12.14 Error Handling

Requirements:

- Graceful Failure
- Retry Capability
- Clear Error Messages

Financial data must never become inconsistent due to UI failures.

12.15 Performance

Target Requirements:

Dashboard Load:

< 2 Seconds

Navigation:

Instant

Financial Calculations:

< 500ms

12.16 Deployment

Platform:

Vercel

Environment Separation:

- Development
 - Staging
 - Production
-

12.17 Technical Architecture Summary

Frontend:

- Next.js 16
- TypeScript
- Tailwind v4
- Shadcn Nova
- Radix UI

Backend:

- Supabase

Data:

- PostgreSQL
- RLS

Infrastructure:

- Vercel
- Edge Functions
- Cron Jobs

The architecture is optimized for a fast MVP while remaining scalable for future wealth management features.

Chapter 13 — MVP Screens Inventory

Authentication

Login Screen

Chapter 14 — Definition of Done

14.1 Purpose

This chapter defines the criteria required to consider the Nume MVP complete.

The MVP is considered complete only when all functional, technical, and quality requirements have been satisfied.

14.2 MVP Success Criteria

The MVP succeeds when a user can:

Wealth Tracking

- Add financial accounts
 - Track assets
 - Track liabilities
 - View current net worth
-

Planning

- Define monthly income
 - Define monthly expenses
 - View monthly surplus
 - Configure emergency fund targets
-

Investments

- Track gold holdings
 - Track stock holdings
 - View current valuations
-

Savings

- Create savings accounts
- Configure interest settings
- Process interest automatically
- Override calculations manually

Loans

- Create loan accounts
- Configure installment details
- Process installments automatically
- Override balances manually

Goals

- Create goals
- Prioritize goals
- Forecast completion dates
- View available wealth progress

Financial Health

- View financial health score
- View emergency fund coverage
- View savings rate
- View debt ratio

14.3 Functional Acceptance Criteria

Authentication

Users can:

- Register
- Verify email
- Login
- Reset password
- Logout

without errors.

Dashboard

Dashboard displays:

- Net Worth
- Financial Health
- Emergency Fund
- Cash Flow
- Asset Allocation
- Liability Allocation
- Goals Progress
- Recent Activity

using real user data.

Planning

Users can:

- Add Income Sources
- Edit Income Sources
- Delete Income Sources
- Add Expense Items
- Edit Expense Items
- Delete Expense Items

Monthly Surplus updates automatically.

Accounts

Users can:

- Create Accounts
- Edit Accounts
- Archive Accounts

for all supported account types.

Savings

Users can:

- Configure annual interest
 - Configure payout frequency
 - Enable auto processing
 - Record manual adjustments
-

Certificates

Users can:

- Configure certificate terms
 - View maturity information
 - View expected returns
-

Gold

Users can:

- Add holdings
- Edit holdings
- View current value

using market pricing.

Stocks

Users can:

- Add holdings
- Edit holdings
- View current value

using market pricing.

Loans

Users can:

- Configure loans
 - Process installments
 - View outstanding principal
-

Goals

Users can:

- Create goals

- Edit goals
 - Reorder goals
 - View forecasts
-

14.4 Technical Acceptance Criteria

Security

- RLS enabled
 - User isolation enforced
 - Protected financial data
-

Performance

Dashboard Load:

Less than 2 seconds

Navigation:

Responsive and immediate

Financial Calculations:

Less than 500ms

Reliability

No critical calculation errors.

No data corruption.

No duplicate automated processing.

14.5 Automation Acceptance Criteria

Savings Engine

System must:

- Calculate interest correctly
 - Respect payout frequency
 - Create system records
 - Update balances
-

Loan Engine

System must:

- Process installments correctly
 - Reduce principal correctly
 - Create system records
-

Snapshot Engine

System must:

Store daily snapshots of:

- Net Worth
 - Assets
 - Liabilities
 - Available Wealth
 - Emergency Fund Coverage
 - Financial Health Score
-

Market Data Engine

System must:

Update:

- Gold Prices
- Stock Prices

without blocking application usage.

14.6 UI Acceptance Criteria

All MVP screens must:

- Support Light Theme
 - Support Dark Theme
 - Be Responsive
 - Follow Design System Tokens
 - Follow Accessibility Standards
-

Empty States

Every major screen must contain:

- Helpful explanation
- Clear next action

No screen should appear broken or incomplete.

14.7 Data Integrity Rules

Net Worth must always equal:

Assets

–

Liabilities

Available Wealth must always equal:

Net Worth

–

Required Emergency Fund

Goal Forecasts must always use:

- Available Wealth
 - Monthly Surplus
-

Loan liabilities must always use:

Outstanding Principal Only

All interest rates must be stored as:

Annual Interest Rates

14.8 MVP Non-Goals

The MVP intentionally excludes:

- Budgets
 - Planned Payments
 - Calendar Features
 - AI Coaching
 - Multi Currency
 - Real Estate
 - Crypto
 - Family Accounts
 - Shared Goals
 - Goal Allocations
 - Goal Wallets
 - Data Import
 - Data Export
-

14.9 Production Readiness Checklist

Before launch:

Product

- All MVP features implemented
 - All MVP screens implemented
 - Empty states completed
-

Data

- RLS enabled
 - Backups configured
 - Snapshot jobs running
-

Automation

- Savings automation verified
 - Loan automation verified
 - Market data updates verified
-

Quality

- Critical bugs resolved
 - Financial calculations validated
 - Performance targets met
-

Deployment

- Production environment configured
 - Environment variables secured
 - Monitoring enabled
-

14.10 MVP Completion Definition

Nume MVP is complete when:

A user can:

1. Add accounts
2. Track wealth
3. Track debt
4. Plan monthly finances
5. Build emergency reserves
6. Track investments
7. Create financial goals
8. Forecast goal achievement
9. Monitor financial health

from a single application

without requiring any feature outside the defined MVP scope.

14.11 Post-MVP Transition

After MVP launch:

Future versions may introduce:

- Budgets
- Planned Payments
- Notifications
- Advanced Automation
- Real Estate
- Multi Currency
- Family Accounts
- AI Financial Coach

These features are explicitly outside MVP scope and must not affect MVP delivery.
